LAB REPORT
on

BIG DATA ANALYTICS
(20CS6PEBDA)

Submitted by

SAIPRAVEEN MARNI(1BM19CS138)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
May-2022 to July-2022

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "**BIG DATA ANALYTICS**" carried out by **SAIPRAVEEN MARNI(1BM19CS138),** who is bonafide student of **B. M. S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of a **BIG DATA ANALYTICS - (20CS6PEBDA)** work prescribed for the said degree.

Course Outcome

CO1	Apply the concept of NoSQL, Hadoop or Spark for a given task
CO2	Analyze the Big Data and obtain insight using data analytics mechanisms.
CO3	Design and implement Big data applications by applying NoSQL, Hadoop or Spark

X. Count the number of documents in Student Collections
db.Students.count()
XI. Count the number of documents in Student Collections with grade :VII
db.Students.count({Grade:"VII"})
retrieve first 3 documents
db.Students.find({Grade:"VII"}).limit(3).pretty();
Sort the document in Ascending order
db.Students.find().sort({StudName:1}).pretty();
Note:
for desending order : db.Students.find().sort({StudName:-1}).pretty();
to Skip the 1st two documents from the Students Collections
db.Students.find().skip(2).pretty()
XII. Create a collection by name "food" and add to each document add a "fruits" array
db.food.insert({_id:1, fruits:['grapes','mango','apple']})
db.food.insert({_id:2, fruits:['grapes','mango','cherry']})
db.food.insert({_id:3, fruits:['banana','mango']})
Page 4 / 5
To find those documents from the "food" collection which has the "fruits array"
constitute of "grapes", "mango" and "apple".

2. Perform the following DB operations using Cassandra.

1.Create a keyspace by name Employee
2. Create a column family by name Employee-Info
with attributes
Emp_Id Primary Key, Emp_Name,
Designation, Date_of_Joining, Salary,
Dept_Name
3. Insert the values into the table in batch
4. Update Employee name and Department of Emp-Id 121
5. Sort the details of Employee records based on salary
6. Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee.
7. Update the altered table to add project names.
8.Create a TTL of 15 seconds to display the values of Employee

1. Create a key space by name Employee

```
cqlsh> describe keyspaces;

system_schema  system        system_distributed
system_auth    test_keyspace  system_traces

cqlsh> create keyspace Employee with replication={'class':'SimpleStrategy','replication_factor':2};
cqlsh> describe keyspace Employee;

CREATE KEYSPACE employee WITH replication = {'class': 'SimpleStrategy', 'replication_factor': '2'}  AND durable_writes = true;

cqlsh> use employee;
```

2. Create a column family by name Employee-Info with attributes Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary, Dept_Name

```
cqlsh:employee> CREATE TABLE Employee_Info(cluster_col text,Emp_id int,Emp_Name text,Designation text,Date_of_Joining timestamp,Salary int,Dept_Name text,primary key(clust
r_col,Salary)) WITH CLUSTERING ORDER BY(Salary DESC);
cqlsh:employee> select*from employee;

cqlsh:employee> select*from employee_info;

 cluster_col | salary | date_of_joining | dept_name | designation | emp_id | emp_name
-------------+--------+-----------------+-----------+-------------+--------+----------
```

3. Insert the values into the table in batch

```
